Ventilation filter job history

RECORD / DATE	ASSET / JOB
DOC-004 / 2026-09-30	MC01-F02 / MC-J109
STATUS	SOURCE
Replacement recorded	Fictional maintenance collection

Initial observation

On 25 September a dust-loaded pleated filter was recorded inside the grey cabinet with the yellow band in Mercer Court ventilation alcove. Asset MC01-F02. Sources IMG-040 and AUD-003 record the earlier observation.

Completion entry

The contractor record states that the filter was replaced on 30 September. AUD-004 is a paperwork update made that day. No later photograph of this exact cabinet or filter is included.

Separate equipment

The heating control cabinet MC01-P11 is by the basement doorway and does not contain this filter. The ventilation unit MC01-P09 has a separate intermittent-noise job. Do not merge those jobs.

Documentation limits

The fictional record does not specify a filter grade, part number, maintenance interval or procedure. The old dusty-filter image remains relevant historical evidence and is not an image of the replacement.
