STATUS	SOURCE
Orientation only	Fictional maintenance collection

Find the cabinet

The heating control cabinet MC01-P11 is a closed pale grey box just inside the basement plant-room doorway. It has a small dark display and one green indicator. Reference image IMG-011 and recording AUD-006 help locate it.

Avoid the wrong cabinet

The grey ventilation filter cabinet with the yellow band is further inside the ventilation alcove. Its asset is MC01-F02. The heating controls and filter cabinet are separate equipment even though both have grey panels.

Other useful orientation

The red expansion vessel MC01-P05 stands on a black ring base beside a tall silver hot-water cylinder. AUD-010 describes that location. The small condensate collection unit below the boilers is described in AUD-011.

Scope

This is a fictional location handover, not an instruction to operate equipment. There are no real access codes, isolation diagrams, manufacturer settings or electrical procedures in the pack.
